SUMMARY

This paper analyzes and discusses the innovative significance of green engineering management and the importance and practical significance of green implementation management in combination with the current actual situation of the construction industry. Green engineering management is to meet the design and construction requirements, to ensure the final quality and safety of the project construction project, and strive to optimize the construction technology, process and other architectural engineering elements from the superstructure level through scientific management, and comprehensively reduce the project in the construction process. LF. This paper further discusses and explores the significance of green engineering management in the current new economic era by elucidating the definition of green engineering management, aiming to explore new ideas for the construction industry in the new economic era.

Keywords: green project; management project ; management values
